# Straumann® Emdogain®

*More than regeneration. Peace of mind.*

## Product Overview

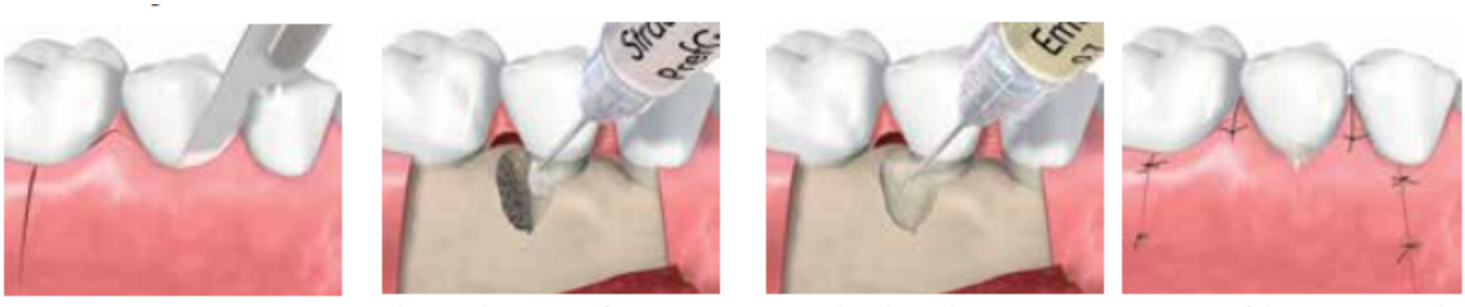

Periodontitis is associated with a loss of tooth-supporting tissues which is irreversible and the main reason for tooth loss if left untreated. Straumann® Emdogain® is the gold standard when it comes to the regeneration of lost periodontal tissues in a safe and predictable way.

Emdogain with periodontal surgery.

### Procedure

Your dentist will freeze the area with local anesthetic. A small incision is made to expose the defect. It is cleaned and then Emdogain is placed. Everything is closed and sutures are placed.

### Post operative care

Your dentist will have you come back in 1-2 weeks to make sure there are no problems with healing. The sutures will dissolve on their own. Use the antibacterial rinse for 3 weeks.. No brushing for 3 weeks, no flossing for 6 weeks..

## If you have any concerns or questions, please attempt to call the clinic first. You will be provided with an emergency number you may call outside of clinic hours
